HEALTH PROFILE REPORT

1968 through 1976
by State and County

February 1979

Public Health Statistics
INDIANA STATE BOARD OF HEALTH

INTRODUCTION

Drawn from reports of county data as listed in Sources of Data, the *Indiana Health Profile* was first compiled and published in 1970. It was aimed at the needs of health planning and based on a concept of "community diagnosis."

Covering a nine-year span (with 1968 as a base year, 1970 as a Census year and each year 1972-1976), this report provides some basic data necessary for the development of health plans; involvement in health issues; and reviews of project proposals on the state, areawide, and county levels.

These county profiles, arranged alphabetically, are prepared on a biennial basis and provide numerous indicators of county "status" in relation to the state. Items include geographic, demographic, socioeconomic, and health categories.

The Public Health Statistics office offers assistance to anyone interested in developing analyses of these and other health data.

For further information, please call AC 317/633-0307 or write the Indiana State Board of Health, Public Health Statistics, 1330 West Michigan Street, Indianapolis, Indiana 46206.

WILLIAM T. PAYNTER, M.D.
SECRETARY
INDIANA STATE BOARD OF HEALTH

SOME COMMONLY UTILIZED RATES AND RATIOS

Crude Birth Rate $= \dfrac{\text{Number of Live Births}}{\text{Total Population}} \times 1000$

Crude Death Rate $= \dfrac{\text{Number of Deaths from All Causes}}{\text{Total Population}} \times 1000$

Cause Specific Death Rate $= \dfrac{\text{Number of Deaths from a Specific Disease}}{\text{Total Population} \div 100{,}000}$

Maternal Death Rate $= \dfrac{\text{Number of Maternal Deaths}}{\text{Number of Live Births}} \times 100{,}000$

Infant Death Rate $= \dfrac{\text{Number of Deaths Under One Year of Age}}{\text{Total Number of Live Births}} \times 1000$

Neonatal Death Rate $= \dfrac{\text{Number of Deaths Under One Month of Age}}{\text{Total Number of Live Births}} \times 1000$

Morbidity Rate $= \dfrac{\text{Number of Cases of a Specific Disease}}{\text{Total Population}} \times 100{,}000$

Case Fatality Rate $= \dfrac{\text{Number of Deaths from a Specific Disease}}{\text{Number of Cases of the Disease}} \times 100$

Stillbirth Rate $= \dfrac{\text{Number of Stillbirths}}{\text{Number of Live Births}} \times 1000$

Premature Birth Rate $= \dfrac{\text{Number of Births Under } 5\frac{1}{2} \text{ lbs.}}{\text{Number of Live Births}} \times 1000$

Dependency Ratio $= \dfrac{\text{Population Under 18 Plus Population 65 \& Over}}{\text{Population 18 to 65}}$

(See 1970 Health Profile Report for Dependency Ratios)

Vital Index (Birth-Death Ratio) $= \dfrac{\text{Number of Births}}{\text{Number of Deaths}} \times 100$

(100 and over indicates a biologically-growing population)

Total Birth Rate - Live Birth Rate = Stillbirth Rate

Stillbirth Rate + Neonatal Death Rate = Perinatal Death Rate

REFERENCE NOTES

Table 1	1 - See 1970 Health Profile for further population breakdowns.
Table 2	* - Prior to 1975, $15,000 and over; similarly, prior to 1972, $10,000 and over.
Table 5	2 - 1968 Deaths by Cause do not necessarily correspond to later figures as a change in coding procedure may have occurred in the present edition of the I.C.D.A. in use since 1969.
Table 6	3 - 1968 Perinatal Deaths are reported according to the present definition in use since 1969, not the '68 definition.
Table 8	4 - Reported Communicable Disease Totals include Reported Rabid Animals but exclude Reported Animal Bites.
Table 11	5 - 1973 Budget Data.
	NA - Not Available.
	.. - Quantity is Zero.

HEALTH PROFILE REPORT

1968 through 1978
by State and County

June 1980

Public Health Statistics
INDIANA STATE BOARD OF HEALTH

INTRODUCTION

Drawn from reports of county data as listed in Sources of Data, the *Indiana Health Profile* was first compiled and published in 1970. It was aimed at the needs of health planning and based on a concept of "community diagnosis."

Covering an 11-year span (with 1968 as a base year, 1970 as a Census year and each year 1975-1978), this report provides some basic data necessary for the development of health plans; involvement in health issues; and reviews of project proposals on the state, areawide, and county levels.

These county profiles, arranged alphabetically, are prepared on a biennial basis and provide numerous indicators of county "status" in relation to the state. Items include geographic, demographic, socioeconomic, and health categories.

The Public Health Statistics office offers assistance to anyone interested in developing analyses of these and other health data.

For further information, please call AC 317/633-0307 or write the Indiana State Board of Health, Public Health Statistics, 1330 West Michigan Street, Indianapolis, Indiana 46206.

SOME COMMONLY UTILIZED RATES AND RATIOS

Crude Birth Rate $= \frac{\text{Number of Live Births}}{\text{Total Population}} \times 1000$

Crude Death Rate $= \frac{\text{Number of Deaths from All Causes}}{\text{Total Population}} \times 1000$

Cause Specific Death Rate $= \frac{\text{Number of Deaths from a Specific Disease}}{\text{Total Population} \div 100{,}000}$

Maternal Death Rate $= \frac{\text{Number of Maternal Deaths}}{\text{Number of Live Births}} \times 100{,}000$

Infant Death Rate $= \frac{\text{Number of Deaths Under One Year of Age}}{\text{Total Number of Live Births}} \times 1000$

Neonatal Death Rate $= \frac{\text{Number of Deaths Under One Month of Age}}{\text{Total Number of Live Births}} \times 1000$

Morbidity Rate $= \frac{\text{Number of Cases of a Specific Disease}}{\text{Total Population}} \times 100{,}000$

Case Fatality Rate $= \frac{\text{Number of Deaths from a Specific Disease}}{\text{Number of Cases of the Disease}} \times 100$

Stillbirth Rate $= \frac{\text{Number of Stillbirths}}{\text{Number of Live Births}} \times 1000$

Premature Birth Rate $= \frac{\text{Number of Births Under } 5\frac{1}{2} \text{ lbs.}}{\text{Number of Live Births}} \times 1000$

Dependency Ratio $= \frac{\text{Population Under 18 Plus Population 65 \& Over}}{\text{Population 18 to 65}}$
(See 1970 Health Profile Report for Dependency Ratios)

Vital Index (Birth-Death Ratio) $= \frac{\text{Number of Births}}{\text{Number of Deaths}} \times 100$
(100 and over indicates a biologically-growing population)

Total Birth Rate - Live Birth Rate = Stillbirth Rate

Stillbirth Rate + Neonatal Death Rate = Perinatal Death Rate

REFERENCE NOTES

Table 1	1 - See 1970 Health Profile for further population breakdowns.
Table 2	* - Prior to 1975, $15,000 and over; similarly, prior to 1972, $10,000 and over.
Table 4	6 - As of January 1, 1978, coverage was extended to include private and public schools, state and local government units (including county hospitals), some private household workers, and some agricultural workers. The coverage of domestics did not significantly increase employment in the services group in any county. However, seasonal agricultural workers, such as corn detasslers when working for a covered employer, caused significant increases in the service industries group in a few counties.
Table 5	2 - 1968 Deaths by Cause do not necessarily correspond to later figures as a change in coding procedure may have occurred in the present edition of the I.C.D.A. in use since 1969.
Table 6	3 - 1968 Perinatal Deaths are reported according to the present definition in use since 1969, not the '68 definition.
Table 8	4 - Reported Communicable Disease Totals include Reported Rabid Animals but exclude Reported Animal Bites.
Table 11	5 - 1973 Budget Data.
	NA - Not Available.
	.. - Quantity is Zero.
